

**CEO
WATER
MANDATE**

Accelerating Corporate Water Stewardship and Resilience

2023 IMPACT REPORT

An initiative in partnership with:

DEAR WATER STEWARDS

As the CEO Water Mandate, a partnership of the UN Global Compact and the Pacific Institute to advance corporate water stewardship, advances on its ambitious 2030 goals to build a water-resilient future, we are excited to share this year's Impact Report. The pressing nature of global water challenges underscores the pivotal role of the CEO Water Mandate, amplifying its significance in addressing the urgent needs of water security worldwide.

Here is the reality check. Global water use is predicted to outstrip supply by up to 40 percent by 2030, just six years from now. Further, water availability is becoming less predictable in many places, in part due to climate change. According to data from WRI's Aqueduct Water Risk Atlas, 25 countries, home to one-quarter of the global population, experience extremely high-water stress annually, often depleting nearly all of their available water resources. Additionally, at least 50 percent of the world's population, approximately 4 billion people, face highly water-stressed conditions at least one month each year. In many regions, intensifying droughts are exacerbating water scarcity with negative impacts to people, nature and economies.

The bottom line? The world is not on track to meet Sustainable Development Goal (SDG) 6 for Clean Water and Sanitation by 2030. According to the United Nations' 2023 Sustainable Development Goals Report, achieving SDG 6 targets by 2030 will require a significant increase in current global rates of progress. Specifically, it would mean a six-fold increase for drinking water, five-fold for sanitation and three-fold for hygiene.

The private sector, as both a significant consumer of water and a powerful lever of change, finds a unifying platform in the CEO Water Mandate, which proudly convenes companies to collectively address water challenges through action.

The year 2023 was an important year for the CEO Water Mandate. We are now 242 companies making a huge impact in building water resiliency.

A landmark achievement took place during the UN 2023 Water Conference – the first of its kind in almost 50 years. To leverage the power of the private sector to advance water solutions, the CEO Water Mandate launched the Business Leaders' Open Call for Accelerating Action on Water. The Open Call's and the WRC's 2030 ambition — for businesses to build water resiliency in operations, supply chains and 100 water-stressed basins — was adopted as the water resiliency target of **the Forward Faster** initiative of the UN Global Compact launched in September 2023.

Alongside the 2023 UN Water Conference, the CEO Water Mandate's Water Resilience Coalition (WRC) launched an Investment Portfolio strategy with five leading corporations contributing to the \$150 million WaterEquity Water Access Fund, facilitating equitable access to water, sanitation and hygiene.

In October 2023, the WRC launched the Women + Water Collaborative, an initiative aimed at improving access to clean water and sanitation in India, while putting women at the center of local water solutions. This is one of 21 collective action projects in 15 basins underway across Asia, Africa, South America and North America as part of the Water Resilience Coalition's 2030 ambition to build water resiliency across 100 Priority Basins.

WASH4Work, the CEO Water Mandate initiative to mobilize business action on water, sanitation and hygiene in workplace operations in communities where companies operate and across supply chains reached 401 signatories to its WASH Pledge in 2023.

Throughout the year, the CEO Water Mandate continued to provide tools to help organizations harness the power of Nature Based Solutions (NBS) to enhance water resiliency, benefiting ecosystems, economies and communities.

The Water Action Hub, a global online collaboration and knowledge-sharing platform for water sustainability and climate resiliency, continues to grow. Active users of the Water Action Hub increased to an all-time high of 4,700 in 2023 from 3,500 in 2022. Likewise, the number of water and climate projects uploaded to the Hub increased to 2,150 from 1,835.

We look forward to driving the business role in water stewardship and taking further steps in achieving net positive impact in 100 priority basins worldwide through collective action.

Sincerely,

Sanda Ojambo
Assistant Secretary-General and
CEO, UN Global Compact

Jason Morrison
President of the Pacific Institute and
Head of the CEO Water Mandate

About the CEO Water Mandate

The CEO Water Mandate is an initiative established in 2007 by the United Nations Secretary-General and the United Nations Global Compact in partnership with the Pacific Institute. The Mandate offers a powerful forum for companies to share good practices and forge partnerships to address urgent water challenges related to scarcity, quality, governance and access to water and sanitation.

OUR MISSION

To mobilize a critical mass of business leaders to address global water challenges through corporate water stewardship in partnership with the United Nations, governments, civil society organizations and other stakeholders.

STEERING COMMITTEE

The Mandate is governed by the Steering Committee, which oversees the initiative's strategic, administrative and financial arrangements. The CEO Water Mandate Steering Committee is composed of:

- Ten corporate representatives from diverse geographies. Corporate representatives will be drawn from Action Platform participants only.
- One representative of the United Nations Global Compact Office.
- Special Advisors representing different stakeholder interests and spheres.
- The Secretariat makes decisions based on a consensus model. When consensus cannot be reached, a simple majority vote decides matters.

OUR COMMITMENT TO WATER STEWARDSHIP

Companies that endorse the CEO Water Mandate agree to continuous improvement in six core areas of their water stewardship practice.

Direct Operations: Measure and reduce water use and wastewater discharge. Develop strategies to eliminate impacts on communities and ecosystems.

Supply Chain and Watershed Management: Encourage improved water management among suppliers and public water managers alike.

Collective Action: Participate in collective efforts with civil society, intergovernmental organizations, affected communities and other businesses to advance water sustainability.

Public Policy: Facilitate the development and implementation of sustainable, equitable and coherent water policy and regulatory frameworks.

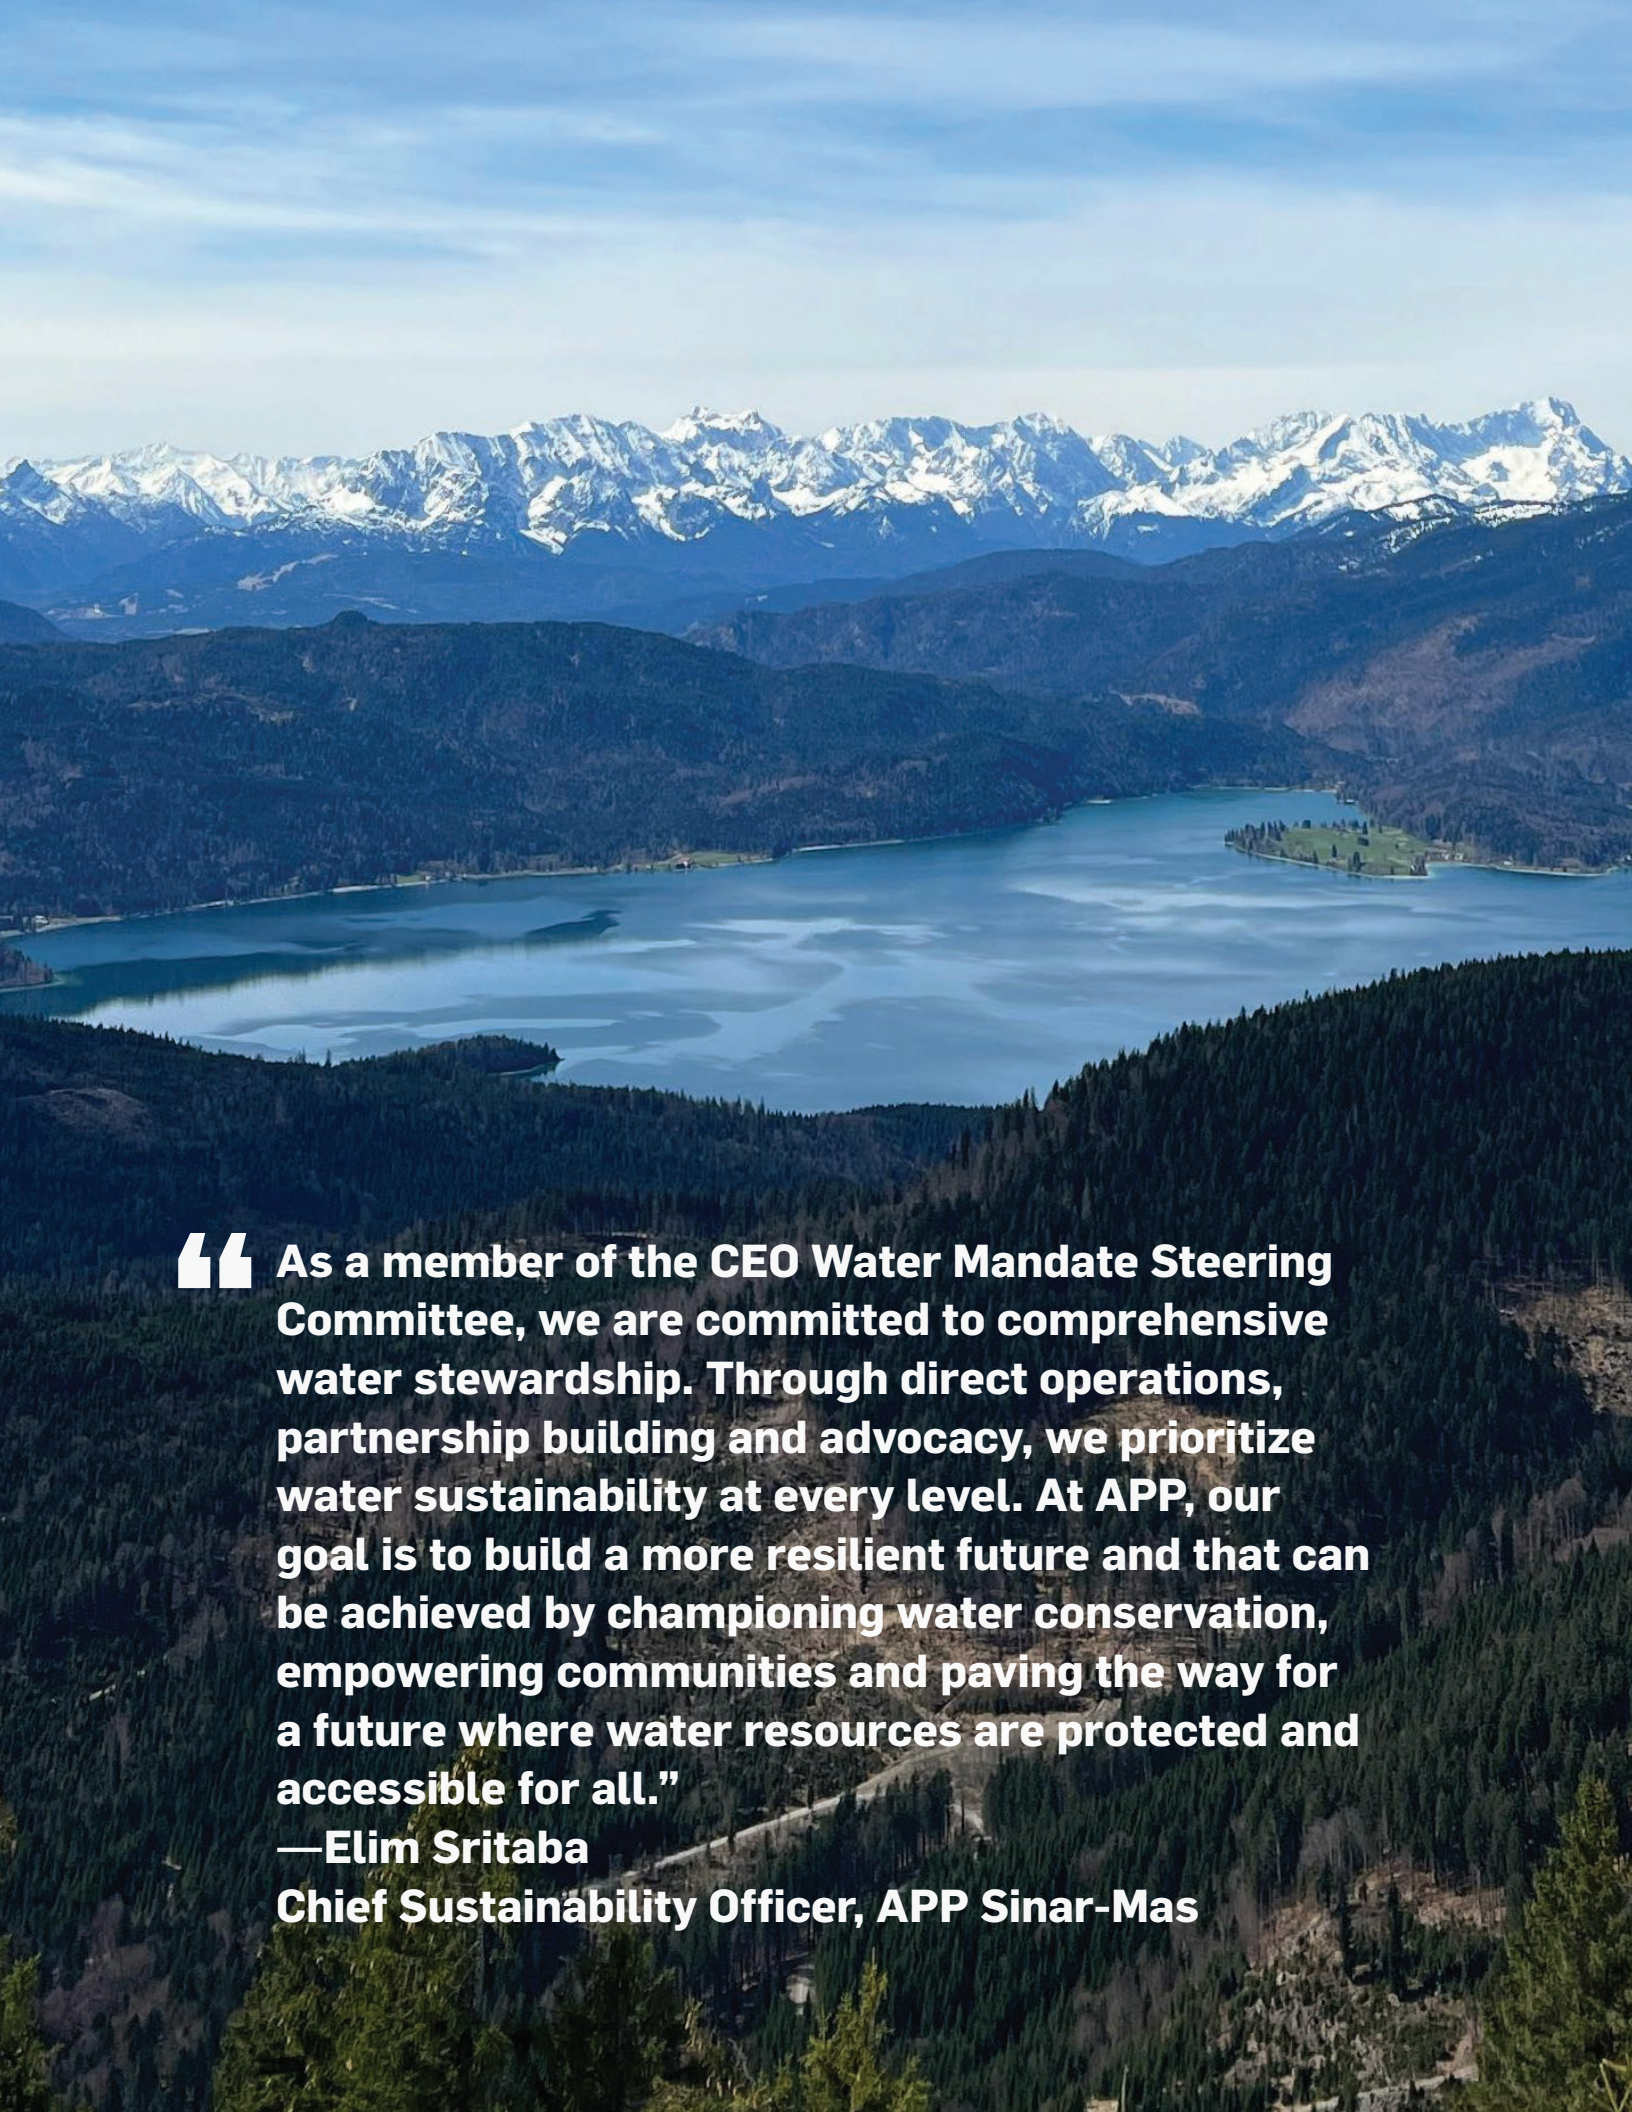

Community Engagement: Improve community water efficiency, protect watersheds and increase access to water services as a way of promoting sustainable water management and reducing risks.

Transparency: Commit to transparency and disclosure in order to be accountable and meet stakeholder expectations.

STEERING COMMITTEE MEMBERS AND SPECIAL ADVISORS

- APP Sinar-Mas
- BHP
- Braskem
- Colgate-Palmolive
- Firmenich
- GSK
- Lenovo
- Netafim
- The Coca-Cola Company
- Woolworth Holdings

“Braskem actively supports its clients in developing solutions for water usage and sanitation by providing a range of chemical, plastic and water treatment products. Our initiatives focus on minimizing water consumption and fostering water circularity. Aligned with the CEO Water Mandate and the Global Compact, we are dedicated to sourcing 100% of our water consumption from safe sources by 2030. These endeavors underscore our unwavering commitment to sustainable water management.”
—Roberto Bischoff, Chief Executive Officer, Braskem

2023 AT A GLANCE

COMPANY MOMENTUM

BASIN ACTION

OUTREACH IMPACT

“As a member of the CEO Water Mandate Steering Committee, we are committed to comprehensive water stewardship. Through direct operations, partnership building and advocacy, we prioritize water sustainability at every level. At APP, our goal is to build a more resilient future and that can be achieved by championing water conservation, empowering communities and paving the way for a future where water resources are protected and accessible for all.”

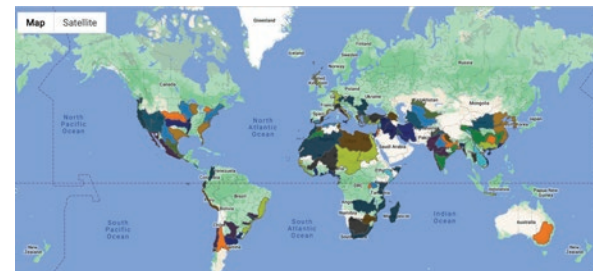

—Elim Sritaba
Chief Sustainability Officer, APP Sinar-Mas

DRIVING WATER RESILIENCE IN ACTION

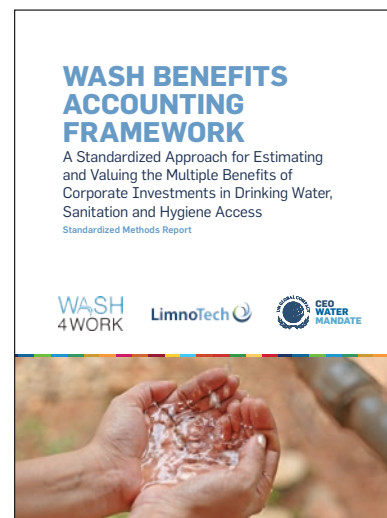

WATER ACTION HUB

The Water Action Hub updated its user interface to increase accessibility and released several new functions, including an interactive map of the CEO Water Mandate's 100 Priority Basins and the World Health Organization/United Nations Children's Fund (WHO/UNICEF) Joint Monitoring Programme's Water Supply, Sanitation and Hygiene global data. Active users of the Water Action Hub increased from 3,500 in 2022 to an all-time high of 4,700 in 2023. Likewise, the number of water and climate projects uploaded to the Hub increased from 1835 to 2150.

WATER, SANITATION AND HYGIENE BENEFITS ACCOUNTING FRAMEWORK

The CEO Water Mandate hosts the WASH4Work Initiative to mobilize and support corporate action on access to safely managed drinking water, sanitation and hygiene (WASH) in workplaces, supply chains and communities. In 2023 a draft multi-benefit accounting framework was released for corporate piloting. This new WASH benefit accounting framework aims to standardize the way companies account for and report on the outcomes and impacts of corporate actions on WASH. It includes evolved leading practice indicators such as climate-resilient WASH, gender equity and financial return on investment. The final framework and guidance for corporate use will be released in June 2024. This WASH framework aligns with the Net Positive Water Impact ambition and guidance.

LAUNCH OF 100 PRIORITY BASINS

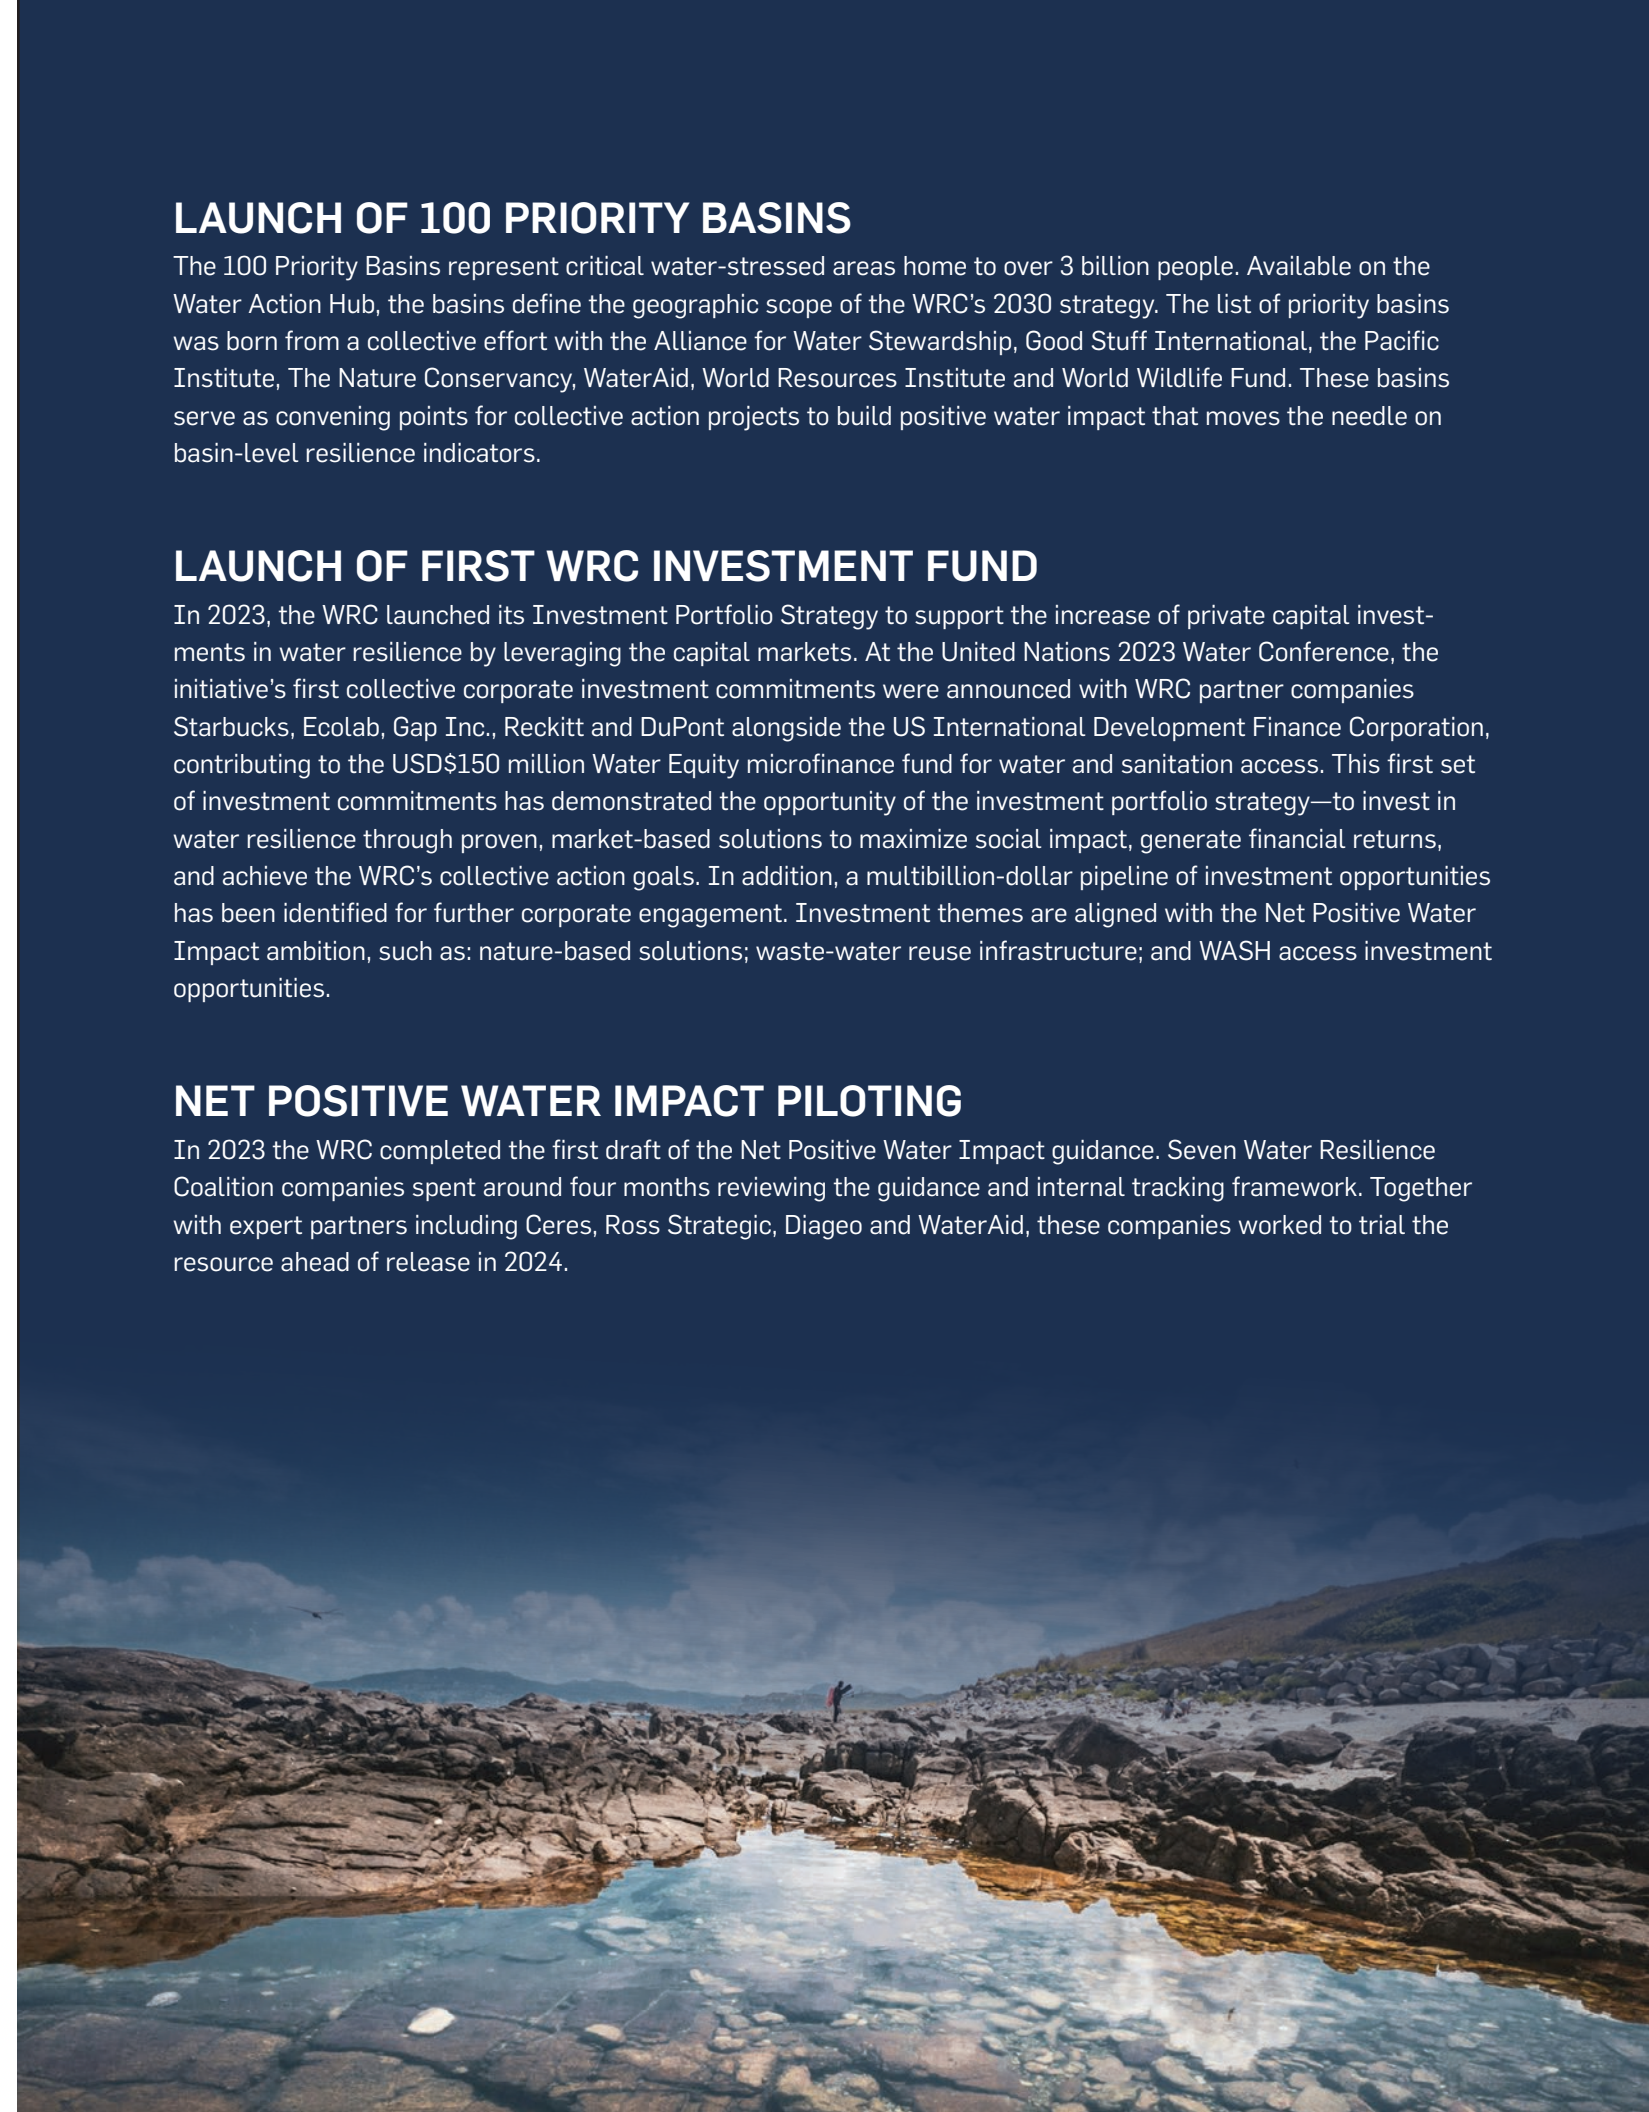

The 100 Priority Basins represent critical water-stressed areas home to over 3 billion people. Available on the Water Action Hub, the basins define the geographic scope of the WRC's 2030 strategy. The list of priority basins was born from a collective effort with the Alliance for Water Stewardship, Good Stuff International, the Pacific Institute, The Nature Conservancy, WaterAid, World Resources Institute and World Wildlife Fund. These basins serve as convening points for collective action projects to build positive water impact that moves the needle on basin-level resilience indicators.

LAUNCH OF FIRST WRC INVESTMENT FUND

In 2023, the WRC launched its Investment Portfolio Strategy to support the increase of private capital investments in water resilience by leveraging the capital markets. At the United Nations 2023 Water Conference, the initiative's first collective corporate investment commitments were announced with WRC partner companies Starbucks, Ecolab, Gap Inc., Reckitt and DuPont alongside the US International Development Finance Corporation, contributing to the USD\$150 million Water Equity microfinance fund for water and sanitation access. This first set of investment commitments has demonstrated the opportunity of the investment portfolio strategy—to invest in water resilience through proven, market-based solutions to maximize social impact, generate financial returns, and achieve the WRC's collective action goals. In addition, a multibillion-dollar pipeline of investment opportunities has been identified for further corporate engagement. Investment themes are aligned with the Net Positive Water Impact ambition, such as: nature-based solutions; waste-water reuse infrastructure; and WASH access investment opportunities.

NET POSITIVE WATER IMPACT PILOTING

In 2023 the WRC completed the first draft of the Net Positive Water Impact guidance. Seven Water Resilience Coalition companies spent around four months reviewing the guidance and internal tracking framework. Together with expert partners including Ceres, Ross Strategic, Diageo and WaterAid, these companies worked to trial the resource ahead of release in 2024.

SCALING BASIN RESILIENCE: THE WATER RESILIENCE COALITION

“We all need to prepare for a world of increasingly extreme and erratic weather that sometimes brings too little water and sometimes too much. And we must do it now, because the accelerating water crisis is affecting us all.”

—Sanda Ojiambo, Assistant Secretary General and Chief Executive Officer, United Nations Global Compact and Jason Morrison, President of the Pacific Institute and Head of the CEO Water Mandate

An initiative of the CEO Water Mandate, the WRC is an industry-driven, CEO-led initiative to address the global water crisis that aims to elevate action on mounting water stress and its connection to climate change to the top of the global corporate agenda. WRC members work to preserve the world's freshwater resources through collective action in water-stressed basins and quantifiable goals.

THE WRC'S 2030 AMBITION

By 2030, achieve positive water impact in over 100 water-stressed basins that support over three billion people and enable equitable and resilient access to water and sanitation for at least 300 million people.

2050 PLEDGE

Net Positive Water Impact:

Achieve and maintain a measurable and Net Positive Water Impact in water-stressed basins on availability, quality and accessibility through industry-leading water operations and collective action initiatives (halfway mark reached by 2030).

Water Resilient Value Chain:

Develop, implement and enable leading, impact-based water resilience practices across 100 per cent of the global value chain.

Global Leadership: Raise global ambition for water resilience through public and corporate outreach.

Key Figures 2023

COMPANY MOMENTUM

7 new companies joined the WRC

140 countries where WRC members operate

5 companies committed investments to a USD\$150 million investment in Water Equity microfinance fund for water and sanitation access

21 Collective Actions Projects

100 Priority Basins identified

15 Priority Basins with engagement

+2100 projects registered in the Water Action Hub

7 Net Positive Water Impact pilots

OUTCOMES AND IMPACT

184M cubic meters/year water saved through operational efficiency

267M cubic meters/year water reclaimed/reused

5.8B cubic meters/year water replenished

28% WRC members worked to remove pollutants beyond legal requirements

+703K hectares conserved & restored

137M people gaining access to WASH

*Data collected from reports published by WRC member companies 2021-2022.

WATER STEWARDSHIP THROUGH COLLECTIVE ACTIONS

“The Women + Water Collaborative is a model for collective action that places women at the center of water solutions. Through it we will reach more women and their families with clean water and greater opportunities as companies across sectors pool resources and expertise behind a united goal”
—Kelly Parsons
Chief Executive Officer, WaterAid America

The CEO Water Mandate recognizes the immediate need to improve access to safe drinking water worldwide and the benefits from collective actions to achieve greater impact. Through the Mandate's WRC, collective actions focus on achieving positive water impact in 100 Priority Basins that support over three billion people.

This work is critically important in India where, according to the WHO/ UNICEF Joint Monitoring Program (JMP), over 400 million people lack access to safely managed drinking water and 600 million people lack access to safely managed sanitation.

As a result, in October 2023, the WRC and WaterAid joined by Gap Inc., Cargill and GSK launched the Women + Water Collaborative, a flagship corporate initiative aimed to improve access to clean water and sanitation in India while putting women at the center of local water solutions. **This is one of 21 collective action projects in 15 basins underway across Asia, Africa, South America and North America as part of the WRC's 2030 ambition to build water resilience across 100 Priority Basins.**

“This initiative aims to empower women's leadership, enhancing water resilience, ensuring water security and fostering equitable access to water and sanitation throughout Indian communities.”
—André Villaça Ramalho
Coordinator, Water Resilience Coalition

The initiative is currently underway in two important basins, the Godavari and the Krishna, with the potential to scale the program to positively impact over 5 million people. The 2024 goal is to scale impact by bringing in more partners. This is a new model for collective action on WASH that can scale to other regions in India and other countries.

SHAPING THE GLOBAL WATER AGENDA: BUILDING WATER RESILIENCE THROUGH GLOBAL MEETINGS

“ At Heineken, we recognize that the climate crisis is also a water crisis—and corporate water stewardship is essential for water resilience. As members of the CEO Water Mandate and Water Resilience Coalition, we stand alongside other industry leaders to play our role in water conservation and restoration efforts. Together, we can learn and drive action to protect critical watersheds and meet the needs of people and the planet now and in the future.”
—Sonia Thimmiah,
Senior Director of Global Sustainability, The Heineken Company

The global water agenda has made significant advances in recent decades. As the effects of climate change increase water stress globally, businesses are stepping up and joining forces to secure our collective humanitarian and economic futures.

Positively, water is gaining a spotlight in the global agenda and the CEO Water Mandate has leveraged the power of global convenings to drive action on water resilience.

In 2023 the United Nations hosted its first Water Conference in 47 years. Leveraging this historic moment, the CEO Water Mandate, through the WRC, rallied the global business community around a shared vision: **positive water impact in 100 Priority Basins by 2030.**

Also during the United Nations Water Conference, the CEO Water Mandate partnered with the International Chamber of Commerce, Ceres, the Alliance for Water Stewardship and AquaFed to launch the **Business Leader’s Open Call to Accelerate Water Action.** Fifty of the world’s largest corporations, operating in over 130 countries and employing 2 million people worldwide, joined the Open Call at its launch in 2023.

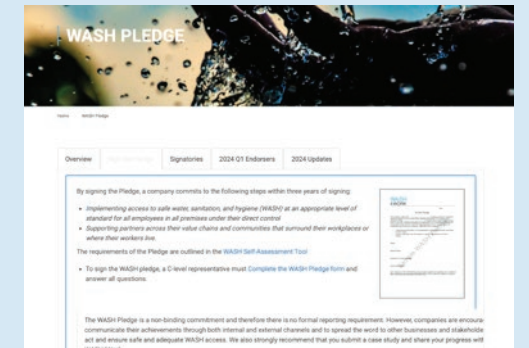

The CEO Water Mandate continued building the movement at United Nations General Assembly in September 2023. During this week, the United Nations Global Compact launched the Forward Faster initiative to accelerate business action across five areas: Gender Equality, Climate Action, Water Resilience, Finance and Investment.

Forward Faster adopted the 2030 ambition of the WRC and Open Call as its water resilience target. By the end of 2023 over 100 additional companies across the three initiatives had joined the movement.

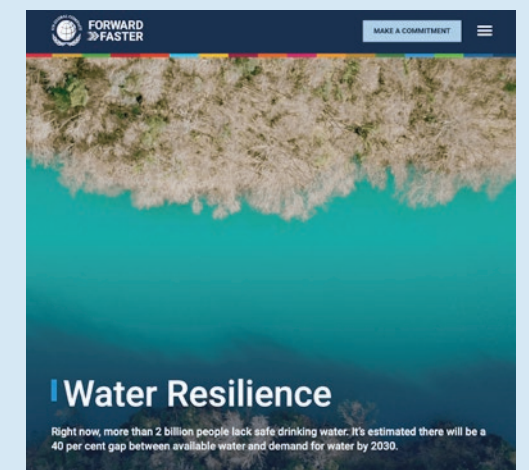

Momentum continued to build at COP28 in Dubai where the 100 Priority Basins ambition was recognized as a high-level outcome of the conference. This kind of recognition gives the 100 Priority Basins critical global legitimacy as we continue to build and mobilize the program.

EXPLORE THE 100 PRIORITY BASINS

“Water is essential for human health, as well as for the ongoing production of our medicines and vaccines. Yet climate change and nature loss are impacting water and health in locally specific ways, with some countries being more vulnerable. That’s why we are focused on water as part of our commitment to contributing to a nature positive world. We are proud to be a founding partner of the Women + Water Collaborative and the Basin Champion for the Godavari, working with communities to improve water quality, quantity and access in India, in turn helping to support local health.”

—Claire Lund
Vice President of Sustainability, GSK
