Strengthening the business case for water, sanitation and hygiene: how to measure value for your business

Executive summary

The global challenge
We all have a role to play in making clean water, decent toilets and good hygiene normal for everyone, everywhere by 2030 – Sustainable Development Goal 6. Businesses can and should be part of the solution to the global water, sanitation and hygiene (WASH) challenge; this, in turn, could present business opportunities and benefits.

Why do we need the guide?
The social, moral and macro-economic case for investment in WASH is clear, and companies are taking some action to improve WASH in the workplace, communities and supply chains. However, to drive the transformational change required to meet the 2030 goal, more companies need to invest directly in WASH programmes and to leverage their influence across their extensive supply chains to persuade suppliers to act.

Anecdotal feedback and good case studies show there are business benefits to investing in WASH, such as reduced absenteeism and improved productivity. This is a useful starting point; but, to drive action at the scale required, more robust evidence is needed that demonstrates the financial value of investing in WASH, to strengthen the business case.

What is the guide and who is it for?
In response to the challenge of quantifying these business benefits, WaterAid, Diageo, GAP Inc., and Unilever have worked with PwC and ODI to develop a practical, step-by-step guide. The guide will help companies understand the business value of their WASH investments and calculate their financial return on investment (ROI).

In association with PwC and ODI
Use the guide to measure the value of WASH interventions to your business

Unlock the potential of people with access to WASH

Unlock the potential of people with access to WASH.

Communicate the ROI from your WASH investments

Communicate the ROI from your WASH investments.

For every $ spent on WASH, measure the business benefits of how many $s are generated

Together we can advance the business case and drive greater action on WASH.

Make WASH interventions in the workplace, supply chains and communities

This creates a ripple effect of healthy, happy and productive people in the workplace.

It is aimed at companies who are likely to have an established WASH programme and want to evidence the financial benefits of their WASH interventions. This may be to:

• Strengthen the internal case for future investment.
• Work with suppliers to scale up WASH programmes.
• Generate more business case data, which can be shared in a consistent format and used to catalyse action across the business community.

What can you do?

This guide provides an opportunity for progressive companies to take a lead, showcasing the incentives for business investment on WASH while catalysing action. WaterAid, Diageo, GAP Inc., and Unilever call on companies to use the guide and, most importantly, share the data they generate, and their learning, with WaterAid.
