

Join the UN Water Metrics Task Team

Close the Gaps in SDG 6 Metrics

The CEO Water Mandate and UN-Water invite organisations to join an 18-month multi-stakeholder project: *Advancing Sustainability and Impact Metrics for Water Quantity, Water Quality and WASH*.

The Task Team brings governments, UN agencies, civil society, research institutions, humanitarian actors and the private sector together to:

- Align national, humanitarian and corporate water data;
- Strengthen interoperability across existing systems; and
- Improve how water-related data are generated, harmonized and applied in support of SDG 6.

18 Months from Alignment to Action

Foundational Phase | 9 months: Form the Task Team and review existing water quantity, quality and WASH monitoring approaches.

Pilot Phase | 9 months: Co-develop and test shared sustainability metrics in 3–4 geographies; document lessons learnt.

- Attendance at six Task Team meetings (approximately 1.5 hours each)
- A possible one-hour bilateral meeting to better understand your organization's specific data sharing tools and metrics that may be harnessed as part of this initiative.
- Approximately 2–3 hours of input during the metrics alignment phase
- A few hours for review and feedback during the pilot and finalization phases

Turn Corporate Participation into Impact

As a corporate participant, your organization can:

- Propose pilot locations aligned with your areas of interest;
- Support pilots through data sharing and/or financial contributions; and
- Receive full recognition for its contribution.

Work alongside governments, UN agencies and civil society to bring corporate and national water data closer together—building on the UN-Water Integrated Monitoring Initiative for SDG 6, the Freshwater Challenge and the CEO Water Mandate's Positive Water Impact ambition.

Choose How Your Organization Contributes

Shape the Approach: Bring strategic and technical expertise to the landscape review and identify alignment across national, corporate, humanitarian and basin-level systems.

Enable Pilots: Propose locations and support pilots through data sharing and/or financial contributions.

Take the Next Step: Contact us to discuss your support opportunities.
